

Use Case: Task Creation

Primary Actor: User

Stakeholders and Interests:

User wants to create tasks quickly and accurately, simple design to fill out the details of the task, and wants a confirmation when the task is created.

Preconditions: User is logged in.

Success Guarantee (Post conditions):

Task is added to the system. History record is created.

Main Success Scenario:

The User logs into the platform with a task to create in mind.

The User selects create a task.

The User enters a title and then selects a creation date, priority level, and status.

Optionally they can add a description, set a due date, or associate a tag with the task.

Once the User creates this task, the system logs it and a history record is created for that task.

The system confirms to the User that the task has been created successfully.

Extensions (or alternate flows):

If required fields are not filled out, prompt the user to fill it out.

If the user quits the platform prematurely, discard the unsaved changes.

If the user can't log in, prompt to reset password or create a new account.

If there was an error saving the task, indicate error.

Special Requirements: N/A

Technology and Data Variations List: N/A

Open Issues: Will the system need to accommodate recurring tasks?
